Vario Attaché – tailor-made Mobile Office solutions

TSP has now been offering special IT solutions for almost two decades. We are setting new standards with our expertise and creativity, particularly in the mobile office branch.

Vario Attaché – always the right choice

The **Vario Attaché** model from the Classic Case product line offers you a completely new and exceptionally flexible laptop case. You can assemble a tailor-made case to meet your exact requirements by choosing from the numerous module options available at www.tspcase.de – and you can do so at very favourable conditions.

Should you require a mobile solution for your service area, we recommend our particularly robust aluminium-framed case with an exterior made of high-quality black ABS.

Our elegant silver grey **Vario Attaché** case with its exterior of Senosan® fulfils the desire for superior design.

The third design in our range is a very attractive fully aluminium case with a finely structured surface.

Independent laptop selection

All cases can be used for any type of laptop, as they are not oriented towards specific manufacturers or models. Integration or migration to another laptop model can be accomplished at any time and without help.

Our cases have an all-purpose mounting plate and are thus designed to house your preferred notebook of all TFT sizes up to 15.4" and base area of up to 365 x 290 mm.

Independent printer selection

A similar thing applies when selecting a printer. The **Vario Attaché** case is designed in a way that allows all current Canon, Hewlett Packard and Olivetti mobile printers to be integrated.

This unique flexibility, for instance, allows already invested printers to continue to be used and only be replaced by new models as the need arises.

Optimally adapted to meet your requirements

Flexibility is the clincher

As an additional attractive performance characteristic each case contains the exact interfaces you really need, all of which are freely accessible on the mounting plate, in a horizontal installation position. Simply assemble your own interface module, whether USB, LAN/ISDN, serial or modem.

The interfaces are completely pre-assembled, can be retrofitted and are interchangeable. VGA-, DVI-, or firewire interface modules are also available on request.

Long operating times are no problem

Do you want to use your printer on the road? Then you'll also need an extra battery kit. We have an optional solution to this end too – state-of-the-art technology at an extremely low price. A charge state display provides you with the exact information on the still available "print reserves".

support for your software applications or do you want to integrate any add-on equipment?

Talk to us – we'll achieve your solution at the usual speed to which you've become accustomed and in the high quality for which TSP is renowned.

Well thought out right down to the last detail

For specific requirements we have innovative solutions at the ready, which can be adapted to suit your individual situation. Do you need a deviant case size, a 12V or 24V connection for motor vehicle operation, Internet access via mobile communications network or local data interchange via Bluetooth, an individual

Mobile work has a name: TSP

We've made it our goal to organize mobile work more simply and efficiently. **Vario Attaché** cases provide you with a fully equipped workstation, defined to meet your precise requirements and budgetary ideas.

The flexibility of our **Vario Attaché** allows you to adapt the laptop case to changed requirements, even after you have made your purchase. TSP is known for its reliable and long-term customer after sales support.
