

New standards for your Mobile Office

Vario Pilot
technology for your
profit

Vario Pilot – tailor-made Mobile Office solutions

TSP has now been offering special IT solutions for almost two decades. We are setting new standards with our expertise and creativity, particularly in the mobile office branch.

Vario Pilot – always the right choice

The model **Vario Pilot** supplements the proven product line Classic Case in a very special way. The new Pilot Case offers all capability characteristics and functionality of the unusually flexibly Vario Attaché in a “Mobile Office on wheels”.

Under the designation **Vario Pilot** we offer an individually applicable Pilot Case with large wheels manufactured in high-quality, grained material in light-grey color.

You achieve the optimal connection of fastidious Design and comprehensive functionality with the model **Vario Pilot Comfort**.

The model **Vario Pilot Customized** offers a Pilot Case completely based on your individual requirements in a very attractive design of different materials and colours.

Independent laptop selection

All **Vario Pilot** cases can be used for any type of laptop, as they are not oriented towards specific manufacturers or models. Integration or migration to another laptop model can be accomplished at any time and without our help.

Our cases are thus designed to house your preferred notebook of all TFT sizes from 15" to 17.1" and base area of up to 410 x 300 mm. Cases for tailor-made sizes would be offered by TSP if requested by our customers.

Independent printer and beamer selection

A similar thing applies when selecting a printer. The **Vario Pilot** case is designed in a way that allows all current Canon, Hewlett Packard and Olivetti mobile printers to be integrated.

This unique flexibility, for instance, allows already invested notebooks, printers or beamers to continue to be used and only be replaced by new models as the need arises.

Optimally adapted to meet your requirements

Flexibility is the clincher

Your Notebook can be used in a traditional way with power adapter or in battery mode on the desk. Thus all interfaces and features of your Notebook are freely accessible.

The data link between laptop and printer can be realized over a carried USB cable or substantially more comfortably over the Bluetooth interface. Your printer is shifted if needed for printing with a handle into its operating position.

Long operating times are no problem

Do you want to use your printer on the road? Then you'll also need an optional battery for the printer. We offer state-of-the-art solutions at a low price.

A charge state display provides you with the exact information on the still available "print reserves".

Well thought out right down to the last detail

For specific requirements we have innovative solutions at the ready, which can be adapted to suit your individual situation. Do you need a deviant case size, a 12 or 24 Volt connection for motor vehicle operation, Internet access via mobile communications network, local data interchange via

Bluetooth, an individual support for your applications or do you want to integrate any add-on equipment? Talk to us - we'll achieve your solution at the usual speed to which you've become accustomed and in the high quality for which TSP is renowned.

Mobile work has a name: TSP

We've made it our goal to organize mobile work more simply and efficiently. Our Vario Pilot Case provides you with a fully equipped workstation, defined to meet your precise requirements and budgetary ideas.

The flexibility of our **Vario Pilot** system allows you to adapt the case to changed requirements, even after you have made your purchase.

TSP is known for its reliable and long-term customer after sales support.
